SAVE ON YOUR BUILDING'S ENERGY COSTS  
**HVAC SYSTEM  
OPTIMIZATION  
PROGRAM**

**ENERGYWISE<sup>SM</sup>**  
Use less. Spend less. Do more.

## Optimize your building's HVAC system and save

Your building's heating, ventilating and air-conditioning system (HVAC) could be costing you big dollars due to inefficient operation. In fact, HVAC systems can account for about half of the energy used in your building. By optimizing your building's HVAC system, you may save 10-20 percent or more of your building's energy costs.

The optimization process consists of systematically investigating the operation of your HVAC system and implementing improvements specifically designed to reduce energy usage while maintaining or improving occupant comfort. Oftentimes these improvements have very quick paybacks. In addition, your local utility has incentives to make the paybacks even more attractive.

## Typical benefits of optimizing your HVAC system

- Reduced energy usage and costs
- Improved occupant comfort
- Better trained and educated in-house maintenance staff to operate the HVAC system
- Documentation of changes for future reference

Combined, these benefits add up to sustained energy savings in the future.

## How the HVAC incentive process works

- STEP 1** A professional will visit your building and provide an evaluation of the HVAC system. The evaluation will contain a list of improvements that can be made, the cost for making them, and the associated energy savings.
- A monetary incentive may be available to help offset the cost of the evaluation.
- STEP 2** Your local electric utility will review the evaluation and inform you of the incentives they will provide for improvements.
- STEP 3** You decide what improvements to make.
- STEP 4** After improvements are made, the local electric utility pays you the incentives as follows:
- 80 percent of the incentives immediately following implementation of improvements.
  - The final 20 percent of the incentives after one year of operation following improvement implementation, provided energy savings meet or exceed what was estimated in the HVAC system evaluation.

For program guidelines or application, please visit with your local public power utility or go to [www.nppd.com](http://www.nppd.com) and click on EnergyWise™ Incentives.
